

ProAnimal[®]

Cost-effective antioxidant formula for young cats and dogs
Highly palatable, chewable tablet

Indications

For use in the prevention of oxidative stress or damage and for support and development of a healthy immune system.

Main Ingredients

Vitamin C, Vitamin E, Vitamin A, Manganese, Zinc, Copper, Selenium, Cysteine, Glutathione, Spirulina, liver flavor, garlic flavor

"I have found that puppies with viral respiratory infections seem to clinically respond better when we treated them traditionally and gave them ProAnimal too. This approach appears to lessen the duration of coughing and the reoccurrence of symptoms. ProAnimal seems to help the pets' compromised immune system, and the vitamins taste great too."

—Mari Lynn Anger, DVM

Strengthening younger animals' immune systems with antioxidant supplementation may prevent illnesses, delay age-related diseases, and promote better responses to traditional therapy if illness does occur. Furthermore, studies have shown that puppies whose diets have been supplemented with antioxidants have a stronger immune response to vaccinations.

Veterinarians often include ProAnimal[®] in client puppy kits. Puppies coming from kennels or shelters often have compromised immune systems, and supplementing their food with ProAnimal[®] strengthens the immune response.

A hy are the minerals included in ProAnimal[®]
Manganese and zinc are considered antioxidant minerals, which are used by the body to synthesize the powerful antioxidant superoxide dismutase.

A hat is spirulina
Spirulina from dried seaweed meal is a highly bioavailable antioxidant. It is also a source of essential amino and fatty acids, beta-carotene, and other vitamins and minerals.
