

Chondro-Flex™DS® Soft Chews

JOINT SUPPLEMENTS

The use of joint nutrient supplements, glucosamine, chondroitin and MSM to soothe stiff joints and help maintain mobility in ageing pets is well established. These are normally used as part of a management program that includes nutrition, exercise and drug therapies.

PATIENT COMPLIANCE

Patient compliance is an essential consideration for products that are chronically administered. To maximise compliance it is vital that such products are presented in a tasty base, one that will not eventually bore the pet and lead to resistance.

CHONDRO-FLEX™DS® SOFT CHEWS

Chondro-Flex™DS® Soft Chews are composed of a highly tasty, meat flavoured and soft textured, base that dogs eagerly accept over a prolonged period. Chondro-Flex™DS® Soft Chews are readily digested and can be fed as a treat following or during a meal, even to ageing pets with dental problems.

Chondro-Flex™DS® Soft Chews contain high levels of glucosamine and chondroitin for chondroprotection and natural renewal of cartilage; also MSM, a source of bio-available sulphur. In addition Manganese Ascorbate is added to act as an anti-oxidant and neutralise free radicals. Each chew contains the normally recommended amount of these ingredients for dogs weighing between 12 – 25 kg.

A high degree of individual response has been noted with pets given joint nutrient supplements. It is normal to give a double amount of joint nutrients for the first six weeks of the program, reducing the amount thereafter. Normal caution should be observed in pets with a history of diabetes, metabolic disorders causing hyperglycaemia, urinary tract stones or allergies to shellfish.

DIRECTIONS FOR USE

Number of Chondro-Flex™DS® Soft Chews to be given during or after food.

Pet Weight	First 6 weeks		Next 3 weeks		Ongoing
	am	pm	am	pm	am or pm
Under 5kg	1/4	1/4	1/4		1/4
5-12.5kg	1/2	1/2	1/2		1/2
12.5-25kg	1	1	1	1/2	1
25-50kg	2	1	1	1	1 to 1-1/2
over 50kg	2	2	2	1	2

	60's	120's	240's
Vet Purchasing	4370400	4370402	4370404
